INSTITUTE OF ARCHITECTURE H.N.G.U. Patan

Title of the Event:	WORKSHOP ON: TOY MAKING
Brief Note:	<p>When it comes to arts and crafts, perhaps no country in the world has a greater diversity of these expressions than India. Each village in every district and any state in all corners of this colourful and intense land has something distinct to the showcase. One of the ways in which a place expresses itself through its arts and crafts .</p> <p>Situated on the west coast of India, with a long coastline open to the Arabian sea, Gujarat has enjoyed trade relations with overseas lands from time immemorial. Trades, invaders, colonisers, migrants and refugees have landed in Gujarat, bringing with them their skills that have become part of the handicraft heritage of the state. Gujarat has a rich and colourful legacy of weaving and handicrafts. Specially in crafts wooden and clay toys have many opportunities in the field of toy design and production. Particularly, clay toys are famous from Patan and wooden toys as well as from 'Idar' skhardi market all over world.</p> <p>In this workshop, the experts will teach them traditional way of making toys also to encourage and enhance way of different techniques and the students will work towards making creative toys using local materials and their design skills.</p>

INSTITUTE OF ARCHITECTURE H.N.G.U. Patan

Title of the Event:	WORKSHOP ON: RECYCLING
Brief Note:	<p>Exploring the Potential for Recycling in the fields of Architecture and Interior Designing.</p> <p>The waste that a society generates has been the measure of its consumptive tendencies, with the larger consumer often labelled as the developed one and its counterparts with a lower consumption being classified in any of the tiers below. However, it has been widely noted and proven that the tendencies of consumption are not sustainable and unless we start using every resource to its full potential and minimize the waste generation, the continued existence of humanity with the currently prevalent lifestyles seems bleak. Against these challenges, the ideas of 3Rs, i.e. Reduce, Reuse and Recycle have been the cornerstone of all efforts in the direction of a more sustainable future. The construction industry is a huge consumer of materials and architecture being the literal starting point for any such project, the introduction of young and budding architects to the possibilities of Recycling and Reusing certain materials might go a long way. Furthermore, it can prove to be a pivotal point of inspiration to many.</p> <p>The workshop aims at providing the students an opportunity to experience first-hand the possibilities of utilizing materials that are traditionally considered wastes and attempts to inculcate the idea of optimum use of material and resources for a secure and healthy future.</p>
